- Available in 5, 10 and 25 mg (please ask about 50 and 100 mg)

DHEA is the most abundant hormone in the bloodstream and higher levels are found in the brain. DHEA levels decline with age and adrenal stress. DHEA supports immune system, thyroid function, as well as memory and energy. DHEA levels are lower in those with anorexia, Type 2 Diabetes, AIDS. Levels are reduced with several drugs, such as steroids and opiate pain medications.

Hormone levels should be monitored by your doctor with DHEA use, as it may affect androgen and estrogen levels. It is a precursor to both male and female hormones.
